ASX ANNOUNCEMENT

Granting of Bauxite Exploration Licenses at Mondlekiri Province - Cambodia

(ASX Code: TNC)

Maxum Metals Pty Ltd ("Maxum") (100% owned subsidiary of Transol Corporation Ltd) is pleased to announce the granting of three Exploration Licenses (EL's) in the Mondlekiri Province, Cambodia. These ELs are prospective for the exploration and possible discovery of bauxite deposits and adjoin the BHP / Mitsubishi project areas, where BHP /Mitsubishi are currently in their second year of exploration of these adjoining areas.

Highlights

- Granting of ELs with a total area of 866 km². The area is located approximately 400 km north east of Cambodia's capital city, Phnom Pehn.
- The project area is prospective for the exploration and possible discovery of bauxite and is contiguous (and north) of the BHP / Mitsubitshi project areas.

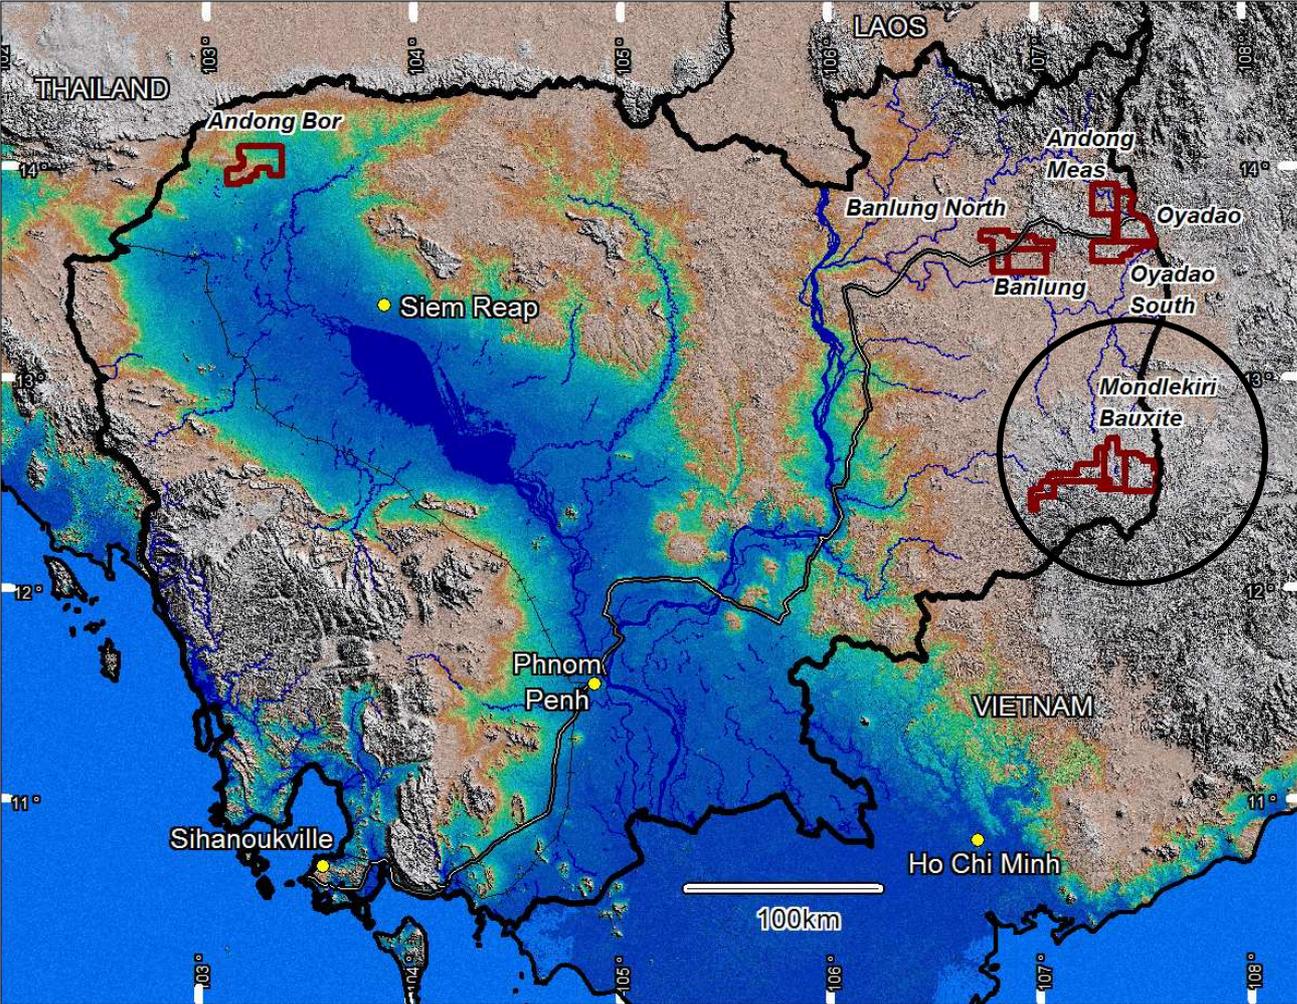

Bauxite is formed by tropical weathering and lateritisation of silicate rich clays and rock. Cainozoic flood basalts covered by the newly granted EL's form extensive plateaus in Cambodia and Vietnam. Published geological maps have been reinterpreted by Transol geologists based on operational experience gained within Cambodia. This work suggests that the published maps are over-simplified and there are equivalent areas with potential for bauxite deposits that extend to Maxum's ELs. The Maxum licenses cover these extensions, some of significant aerial extent is shown in the attached map.

The Company is currently formulating a first pass exploration program for the project that will commence in early November (at the cessation of the current wet season). This will involve field mapping, auger sampling, trenching and excavation of test pits.

The Directors of Transol consider the granting of these licenses to be strategic and complementary to the ongoing policy of the Company of active exploration for both precious and base metals and bulk commodities in South East Asia and specifically Cambodia.

The Mondlekiri Bauxite licenses further enhance the exploration project portfolio of the Company and are a diversification into potential bulk commodities. Transol is well established in Cambodia and continues to play the part of a very active explorer.
